

## AKVIS MultiBrush

### image retouching tool

Our Rating: ★★★★★(Excellent)

AKVIS MultiBrush (formerly AKVIS Stamp) is a photo retouching software (with plug-in for Photoshop compatible graphics editors), that allows you to achieve similar results to the Photoshop Healing Brushes. It works much better than any standard cloning brush, since it automatically adjusts the clone touch-up area to the color range, texture and brightness of the target background. The results is an immediate and virtually undetectable touch-up. AKVIS MultiBrush can be used to easily remove scratches, wrinkles, skin imperfections and other flaws. You can achieve excellent results, quickly and easily.
